

# Program of Sixth Workshop on Reproducible Research in Pattern Recognition

21 August 2026 Lyon (Louis Néel Building, room B6)

|             | Title                                                                                                                                                         | Authors                                                                                                      | Duration                          | # id | Track |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|-----------------------------------|------|-------|
| 8h30 8h40   | Workshop Introduction from organizers (Workshop program presentation)                                                                                         | Federico Bolelli                                                                                             | 5 min (+ 5 min prep)              |      |       |
| 8h40 9h20   | Keynote 1                                                                                                                                                     | Sorina Camarasu Pop (CREATIS)                                                                                | 40 min (30 min + 10 min question) |      | K1    |
| 9h20 9h40   | T1 #3 An Open, Hardware-Independent Protocol for Reproducible Data-Budget Evaluation of Semi-Supervised Learning Methods                                      | Erwan Bertrand-Bonvillain, Yassine Nasser and Frédéric Ros                                                   | 20min (15min + 5 min question)    |      | T1    |
| 9h40 10h00  | T1 #5 Why Ranking Anomaly Detection Algorithms Isn't as Reliable as You May Think                                                                             | Simon Klüttermann, Jérôme Rutinowski, Frederik Polachowski and Alice Kirchheim                               | 20min (15min + 5 min question)    |      | T1    |
| 10h00 10h30 | Pause                                                                                                                                                         |                                                                                                              |                                   |      |       |
| 10h30 12h30 | Comp paper Session 1                                                                                                                                          |                                                                                                              |                                   |      |       |
| 10h30 10h50 | T1 #1 Beating the Style Detector: Three Hours of Agentic Research on the AI-Text Arms Race                                                                    | Andreas Maier, Moritz Zaiss and Siming Bayer                                                                 | 20min (15min + 5 min question)    |      | T1    |
| 10h50 11h05 | T2 #15: DepthPolyp in Practice: Reproducible Deployment and Practical Lessons for Real-Time Colonoscopy Segmentation                                          | Zhuoyu Wu, Wenhui Ou, Lexi Zhang, Pei-Sze Tan, Mingze Sun, Junhe Zhao, Wenqi Fang and Raphaël C.-W. Phan     | 15 min (10min + 5 min question)   |      | T2    |
| 11h05 11h20 | T2 #14 Reproducibility Companion Paper: Comparative Evaluation of Deep Learning Architectures and Training Strategies for Diabetic Retinopathy Classification | Mohamed Lamine Benhabireche, Mourad Belhadj, Dalila Tamzalit and Oussam                                      | 15 min (10min + 5 min question)   |      | T2    |
| 11h20 11h35 | T2 #11 Back to Reproducibility in 3D Anomaly Detection: Revisiting RGB-D for Point-Cloud Evaluation                                                           | Remi Lhoste, Antoine Vacavant and Damien Delhay                                                              | 15 min (10min + 5 min question)   |      | T2    |
| 11h35 11h50 | T2 #12 Benchmarking Transformers on Spatio-Temporal River Water Temperature Modeling: Implementation and Reproducibility Notes                                | Linlin Jia, Benjamin Fankhauser, Vidushi Bigler and Kaspar Riesen                                            | 15 min (10min + 5 min question)   |      | T2    |
| 11h50 12h05 | T2 #2 Enabling 8B Bitwise Autoregressive Image Generation on Edge GPUs – Implementation and Reproducibility Notes                                             | Enrico Vezzali, Costantino Grana and Federico Bolelli                                                        | 15 min (10min + 5 min question)   |      | T2    |
| 12h05 12h20 | T2 #6 Companion Paper on Multi-modal BLIP-2: Q-Former Variants and Metric Robustness                                                                          | Antoine Brimont, Titus Zaharia and Ruxandra Tapu                                                             | 15 min (10min + 5 min question)   |      | T2    |
| 12h30 13h30 | Lunch                                                                                                                                                         |                                                                                                              |                                   |      |       |
| 13h30 14h10 | Keynote 2                                                                                                                                                     | Simon Tournier (Inserm)                                                                                      | 40 min (30 min + 10 min question) |      | K2    |
| 14h10 14h25 | T1 #4 Aegis: Towards Agentic Support for Software Artifact Reviews                                                                                            | Konstantin Kirchheim, Sebastian Nielebock and Frank Ortmeier                                                 | 20min (15min + 5 min question)    |      | T1    |
| 14h25 14h40 | T1 #8 M2S-KD: A Multi-to-Single Modal Distillation Framework for Visible-Infrared Object Detection                                                            | Xiguan Li, Kun Wang, Erting Pan, Zi Wang, Yibin Ye, Zhang Li, Qifeng Yu and Banglei Guan                     | 20min (15min + 5 min question)    |      | T1    |
| 14h40 15h00 | T1 #16 Auditing the Auditor: A Reproducibility Study of Grounded Hallucination Auditing in Video Summarization                                                | Muhammad Aqeel, Maham Nazir, Marco Cristani and Francesco Setti                                              | 20min (15min + 5 min question)    |      | T1    |
| 15h00 15h30 | Pause                                                                                                                                                         |                                                                                                              |                                   |      |       |
| 15h30 15h50 | Outcome on RR labels                                                                                                                                          | Miguel Colom                                                                                                 | 20min (15min + 5 min question)    |      | K3    |
| 15h50 16h05 | T2 #9 On the Reproducibility of the EAST-SPL Pipeline: Event-Aware Statistical Tiling for Soccer Player Localization                                          | Abolfazl Chaman Motlagh and Mikael Nilsson                                                                   | 15 min (10min + 5 min question)   |      | T2    |
| 16h05 16h20 | T2 #10 Reproducing Vision Transformer-Based Risky Tackle Detection in American Football Practice Videos: A Companion Study                                    | Syed Ahsan Masud Zaidi, Lior Shamir and Scott Dietrich                                                       | 15 min (10min + 5 min question)   |      | T2    |
| 16h20 16h35 | T2 #13 Implementation and Reproducibility Notes on Robust 3D Human Pose Estimation from mmWave Radar via Spatio-Temporal Representation Learning              | Kai-Ming Cao, Ming-Han Lee, Wei-Che Hsu, Kun-Ru Wu, Hong-Dun Lin, Ren-De Xie, Bo-Yang Chen and Yu-Chee Tseng | 15 min (10min + 5 min question)   |      | T2    |
| 16h35 16h50 | T2 #7 Reproducing AERO-DETR Configuration-Wise Stability and Implementation Constraints in Runway Extraction                                                  | Durga Prasad Dhulipudi                                                                                       | 15 min (10min + 5 min question)   |      | T2    |
| 16h50 17h05 | T2 #17 Scaling Closed-Loop Feature Channel Configuration with LLMs                                                                                            | Tolgay Atinc Uzun, Radu Timofte and Dmytro Ignatov                                                           | 15 min (10min + 5 min question)   |      | T2    |
| 17h05       | Closing Discussions                                                                                                                                           |                                                                                                              |                                   |      |       |
